

The current **12 sources** in your notebook have been reviewed against the **PRD v4 Addendum** requirements 6.

This curated collection of 12 sources is **complete, highly focused, and free of redundancy** 6, 8, 9. Every source directly supports one of the core technical pillars of your MVP build 6.

Finalized Workspace Sources (Grouped by Category)

1. Core PRD & MVP Specifications

- **NTRO_PS26155_PRD_v4_Addendum.md**: The authoritative build specification establishing hybrid governance, deterministic rule enforcement, single-path testing, and acceptance criteria 6.
- **Problem Statement ID**: Outlines the core challenge of multi-vendor CLI syntactic diversity and the requirement for automated pass/fail auditing 8.

2. AI Engine & Translation Architecture

- **Leveraging LLM Agents for Translating Network Configurations**: Academic paper proving **Intent-Based RAG (IRAG)** and multi-agent translation achieving **97%+ syntax correctness** 5.
- **Research report: NTRO PS 26155 - AI-Driven Multi-Vendor Security Auditor**: Technical framework detailing the AI adaptation loop and vendor-neutral normalization pipeline 9.

3. Normalization & Verification Standards

- **OpenConfig**: Industry-standard, vendor-neutral YANG data models serving as the basis for your **Common Security Model (CSM)** 7.
- **GitHub - batfish/batfish**: Defines offline mathematical modeling of device configurations to verify access controls and reachability without live hardware risk 4.

4. Security Frameworks & Hardening Baselines

- **<https://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-53r5.pdf>**: Official catalog of NIST SP 800-53 Rev. 5 security and privacy controls 12.
- **CIS Cisco Benchmarks**: Specific CIS configuration guidelines and security controls for Cisco devices 11.
- **CIS Benchmarks Explained: A Practical Implementation Guide**: Practical implementation guide covering Level 1 vs. Level 2 profiles and continuous drift monitoring 2.
- **Research report: Web Sources for NTRO PS 26155 Security Auditor PRD**: Synthesis of digital resources for deterministic security rule baselines.

5. Case Studies & Reference Projects

- **Research report: Projects & Implementations for NTRO PS 26155**: Technical roadmap highlighting successful implementations and digital twin strategies.

- **AEGISNET AI | AI-Driven Multi-Vendor Network Security Compliance Auditor - Demo:** Demo reference for unified security auditing and remediation.

Redundancy Assessment

- **No further sources need to be removed.** The previous generic landing pages have already been filtered out.
- All 12 active sources complement one another without overlap—balancing high-level regulatory frameworks (**NIST/CIS**) 2, 12 with concrete software specifications (**PRD v4 Addendum, OpenConfig, Batfish**) 4, 6, 7.

Your notebook source context is **100% finalized and locked in** for your project presentation and technical defense.

💡 *Would you like me to generate a 1-page Q&A cheat sheet covering the top technical questions judges might ask about your sources and architecture during your presentation?*
